

La Giunta di Dipartimento ai sensi dello Statuto del Politecnico di Bari

L’Affidamento diretto nei contratti pubblici

I documenti contabili pubblici consuntivi

Inventory is a large investment for many companies so it is important that this asset be managed wisely. Too little inventory means lost sales opportunities, whereas too much inventory means unproductive investment of resources as well as extra costs related to storage, care, and protection of the inventory. Ratio analysis is used to measure how well management is doing at maintaining just the right amount of inventory for the needs of their particular business.

In 1955, in one of the earliest uses of a true computer to facilitate accounting tasks, General Electric Company used a UNIVAC computer to process its payroll. Initially it took the computer forty hours just to process payroll for one pay period. The first modern era spreadsheet software for personal computers, VisiCalc, became available in 1978.

Definizione ai fini contabili dei Dipartimenti e degli altri Centri autonomi di Gestione

A service company provides intangible services to customers and does not have inventory. Some examples of service companies include lawyers, doctors, consultants, and accountants. Service companies often have simple financial transactions that involve taking customer deposits, billing clients after services have been provided, providing the service, and processing payments.

An operating cycle is the amount of time it takes a company to use its cash to provide a product or service and collect payment from the customer. Completing this cycle faster puts the company in a more stable financial position. A typical operating cycle for a service company begins with having cash available, providing service to a customer, and then receiving cash from the customer for the service.

Financial accounting information is mostly historical in nature, although companies and other entities also incorporate estimates into their accounting processes. For example, you will learn how to use estimates to determine bad debt expenses or depreciation expenses for assets that will be used over a multiyear lifetime. That is, accountants prepare financial reports that summarize what has already occurred in an organization.

When you buy merchandise online, shipping charges are usually one of the negotiated terms of the sale. As a consumer, anytime the business pays for shipping, it is welcomed. For businesses, shipping charges bring both benefits and challenges, and the terms negotiated can have a significant impact on inventory operations.

La motivazione del provvedimento amministrativo

Gli organi di Ateneo come stabiliti nello Statuto del Politecnico di Bari

Accounting for inventory is a critical function of management. Inventory accounting is significantly complicated by the fact that it is an ongoing process of constant change, in part because (1) most companies offer a large variety of products for sale, (2) product purchases occur at irregular times, (3) products are acquired for differing prices, and (4) inventory acquisitions are based on sales projections, which are always uncertain and often sporadic.

La struttura e le funzioni del Dipartimento Universitario

In the process of auditing the company, the auditing firm will conduct tests to determine whether, in the auditor's opinion, the financial statements accurately reflect the financial position of the company. If the auditor feels that transactions, financial schedules, or other records do not accurately reflect the company's performance for the past year, then the auditor can issue a negative audit report, which could have major negative effects on the company's image in the financial community.

As we have discussed, one of the hardest assets to control within any organization is cash. One way to control cash is for an organization to require that all payments be made by check. However, there are situations in which it is not practical to use a check. For example, imagine that the Galaxy's Best Yogurt runs out of milk one evening.

The benefits of using a computerized accounting system outweigh the costs of purchasing one, and almost all companies, even very small ones, can afford to and do use a computerized accounting system. That is not to say that paper-based or manual accounting systems and processes have disappeared. Most businesses have some form of both noncomputerized and computerized systems.

The bank is a very important partner to all businesses. Not only does the bank provide basic checking services, but they process credit card transactions, keep cash safe, and may finance loans when needed. Bank accounts for businesses can involve thousands of transactions per month. Due to the number of ongoing transactions, an organization's book balance for its checking account rarely is the same as the balance that the bank records reflect for the entity at any given point.

Companies are required to close their books at the end of each fiscal year so that they can prepare their annual financial statements and tax returns. However, most companies prepare monthly financial statements and close their books annually, so they have a clear picture of company performance during the year, and give users timely information to make decisions.

The larger the business, the greater the likelihood that that business will have a large volume of transactions that need to be recorded in and processed by the company's accounting information system. You've learned that each transaction is recorded in the general journal, which is a chronological listing of transactions. In other words, transactions are recorded into the general journal as they occur.

A related use of the statement of cash flows is that it provides information about the quality of a company's net income. A company that has records that show significantly less cash inflow on the statement of cash flows than the reported net income on the income statement could very well be reporting revenue for which cash will never be received from the customer or underreporting expenses.

You own a small clothing store and offer your customers cash, credit card, or in-house credit payment options. Many of your customers choose to pay with a credit card or charge the purchase to their in-house credit accounts. This means that your store is owed money in the future from either the customer or the credit card company, depending on payment method.

Although our discussion will consider inventory issues from the perspective of a retail company, using a resale or merchandising operation, inventory accounting also encompasses recording and reporting of manufacturing operations. In the manufacturing environment, there would be separate inventory calculations for the various process levels of inventory, such as raw materials, work in process, and finished goods.

La progressione economica tra le aree

A company will account for some events for long-term assets that are less routine than recording purchase and depreciation or amortization. For example, a company may realize that its original estimate of useful life or salvage value is no longer accurate. A long-term asset may lose its value, or a company may sell a long-term asset.

The statement of cash flows can be prepared using the indirect approach or the direct approach. The indirect method approach reconciles net income to cash flows by subtracting noncash expenses and adjusting for changes in current assets and liabilities, which reflects timing differences between accrual-based net income and cash flows.

One of the key factors for success for those beginning the study of accounting is to understand how the elements of the financial statements relate to each of the financial statements. That is, once the transactions are categorized into the elements, knowing what to do next is vital. This is the beginning of the process to create the financial statements. It is important to note that financial statements are discussed in the order in which the statements are presented.

A corporation is a legal business structure involving one or more individuals (owners) who are legally distinct (separate) from the business that is created under state laws. The owners of a corporation are called stockholders (or shareholders) and may or may not be employees of the corporation. Most corporations rely on a combination of debt (liabilities) and equity (stock) to raise capital.
